Workshop & B2B

The Twin Transition in Agri-food: challenges and opportunities

**23/09/2022**

**Environment Park Congress Centre  
Via Livorno 60 - Torino  
Copenhagen Room**

Digitalisation plays a key role in the framework of Industry 4.0 revolution, but the entrepreneurial world is also in the surge of a green transition towards a decarbonised and environmentally friendly economy. Twin Transition may thus become the key to accelerate the decarbonisation of the economy.

In this challenging context, the Agri-food sector plays a major role as it needs to feed the future global population, it is estimated that, by the year 2050, the population of the world will be 9.7 Billion. Pressures to increase production, climate change, increasing labour and production costs represent a major challenge for the future of agriculture. The sector is therefore forced to enhance production sustainably, to rethink methods to improve productivity, reduce waste and increase traceability.

This workshop, organised by Torino Chamber of Commerce and Unioncamere Piemonte, in the framework of ALPS Enterprise Europe Network activities, in cooperation with European Training Foundation, aims at exploring emerging opportunities and best practices in the Agri-food sector and enhancing networking among companies, research centres and innovation clusters.
